

SaaS-based Workload Automation

Eliminate infrastructure requirements and easily upgrade to the latest version as soon as it's available.

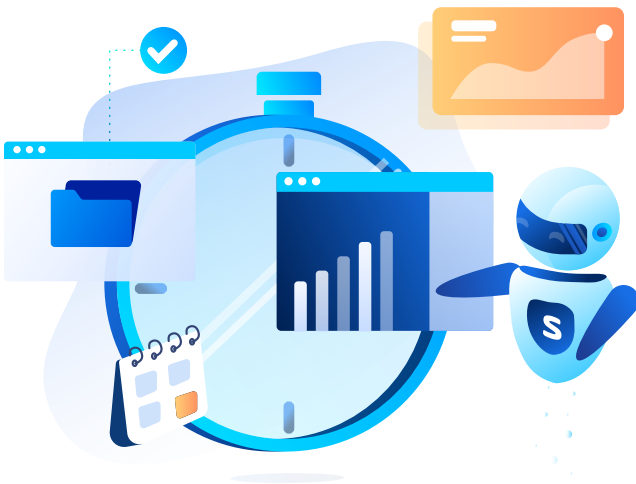

The Stonebranch SaaS-based workload automation solution is easy to deploy in the cloud. You can quickly enable your organization with the ability to start scheduling automated IT jobs, workloads and business processes via your browser-based web interface. This subscription-based service removes the need for large up-front capital requirements. Plus, it eliminates costly infrastructure and management expenditures.

- Browser-based user interface
- Subscription-based pricing
- Upgrades and maintenance included
- Role-based Security
- 24/7 Support around the Globe
- Integrate via agents and REST APIs

What is different about Stonebranch SaaS Workload Automation?

Many workload automation solutions claim to be cloud-based. While they may offer limited web browser access, the reality is that these solutions are deployed on-prem. and only make a fraction of their full functionality available from the web. This "thick client" approach eliminates the real cost-savings and efficiency gains you would find with a true SaaS-based model.

With Stonebranch SaaS, you are deploying our full IT automation platform in the cloud, with all the bells and whistles. In addition, Stonebranch manages the hardware, network infrastructure, and all upgrades to keep the solution running – so you can focus your time on automating the business.

Stonebranch SaaS Business Benefits:

Subscription-based pricing – Setup, maintenance and upgrades are included. No need for additional hardware or infrastructure.

Easy upgrades with the latest features - Move to the latest version with the newest functionality as soon as it is available. Plus, with the SaaS-based deployment model, Stonebranch will perform new upgrades as part of your subscription.

The **Browser-based user interface** means that end-users can manage the solution without requiring technical support from IT staff.

Provide predictable costs and lower your total costs of ownership. Your finance team will love moving from a CAPEX to OPEX model. Plus, you can reallocate resources to grow the business.

Integration with any application or platform – Stonebranch can connect your entire hybrid IT environment. Integrate to any application or platform. It doesn't matter if it is in the cloud, on-prem. or somewhere in-between.

Stonebranch SaaS Features:

Role-based security (LDAP, Active Directory, SSO) - Best-in-class security features, such as an isolated virtual private cloud environment, a fault-tolerant architecture, automated backups and disaster recovery, and system and SLA monitoring.

Secure networking - Secure data transmission between your various systems and environments including mainframes, distributed on-premise networks, and cloud services environments.

Always on - High availability with 99.5 % service uptime guaranteed and 24/7 support around the globe.
